

Breathe Some AIR  
Into Your Brand

A brand is a collection of images and ideas representing an economic producer; more specifically, it refers to the descriptive verbal attributes and concrete symbols such as a name, logo, slogan, and design scheme that convey the essence of a company, product or service.

*Source: Wikipedia*

“A brand is not a product. It is the sum total of everything a company does — the good, the bad and even the off strategy — that creates a large context or an identity in the consumer’s mind.”

**Scott Bedbury**

Formerly of Nike and Starbucks

# Some Strong Brands

# Brand Message

Safety

# Brand Message

Overnight delivery

# Brand Message

Disney

Family fun

# Brand Message

**Adobe**

Amazing software, good-hearted,  
handsome evangelists, ahead of  
their time, absolute geniuses

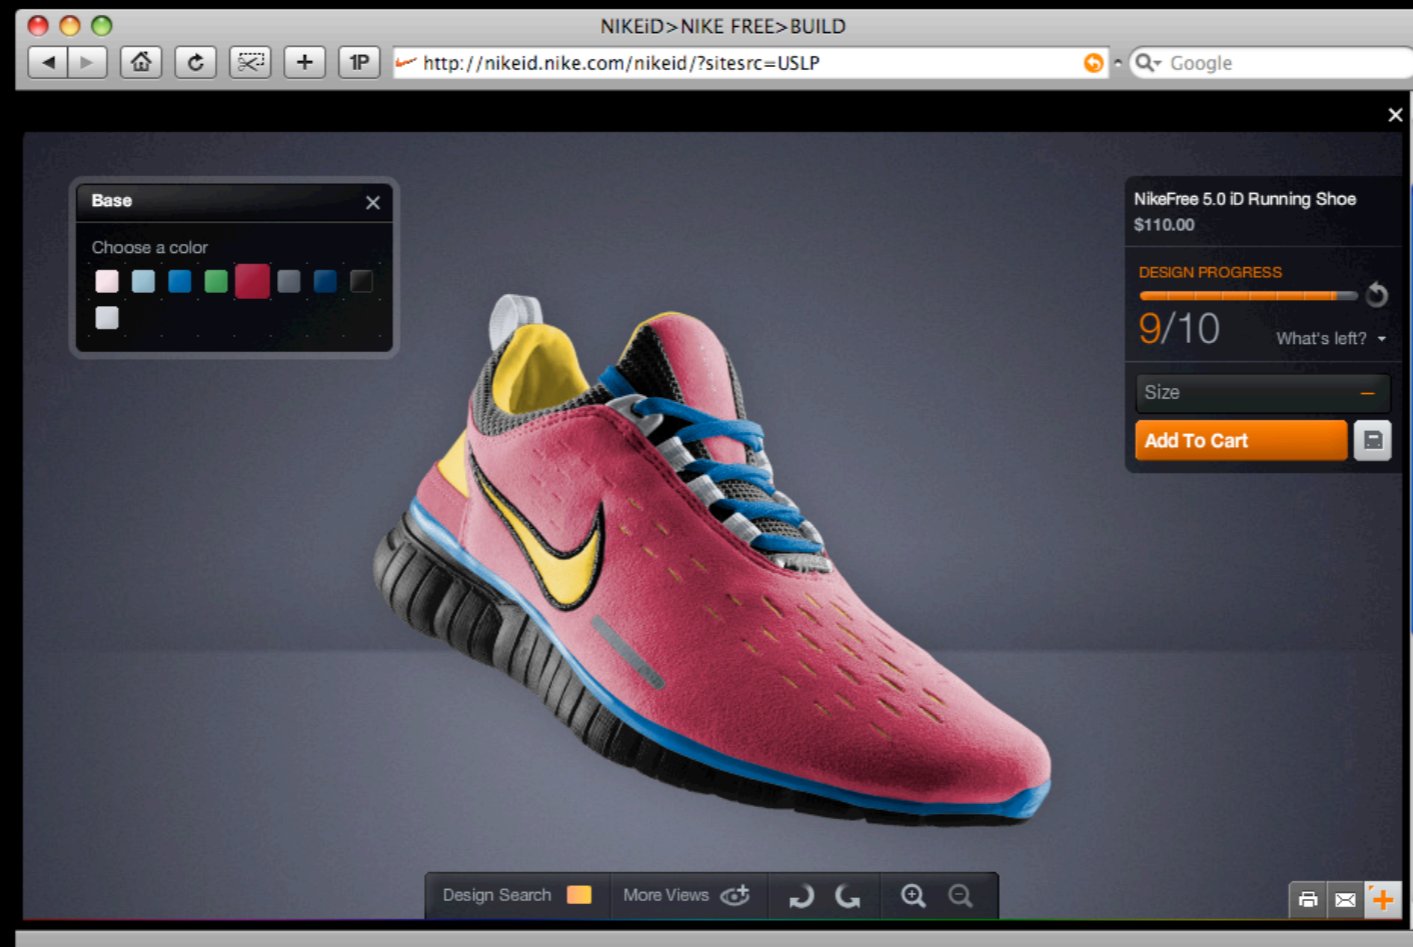

# Successful Branding Campaign

# Branding in the Browser

RIA technologies like Flash and Flex allow designers to create engaging branding experiences in the browser.

# Limitations in the Browser

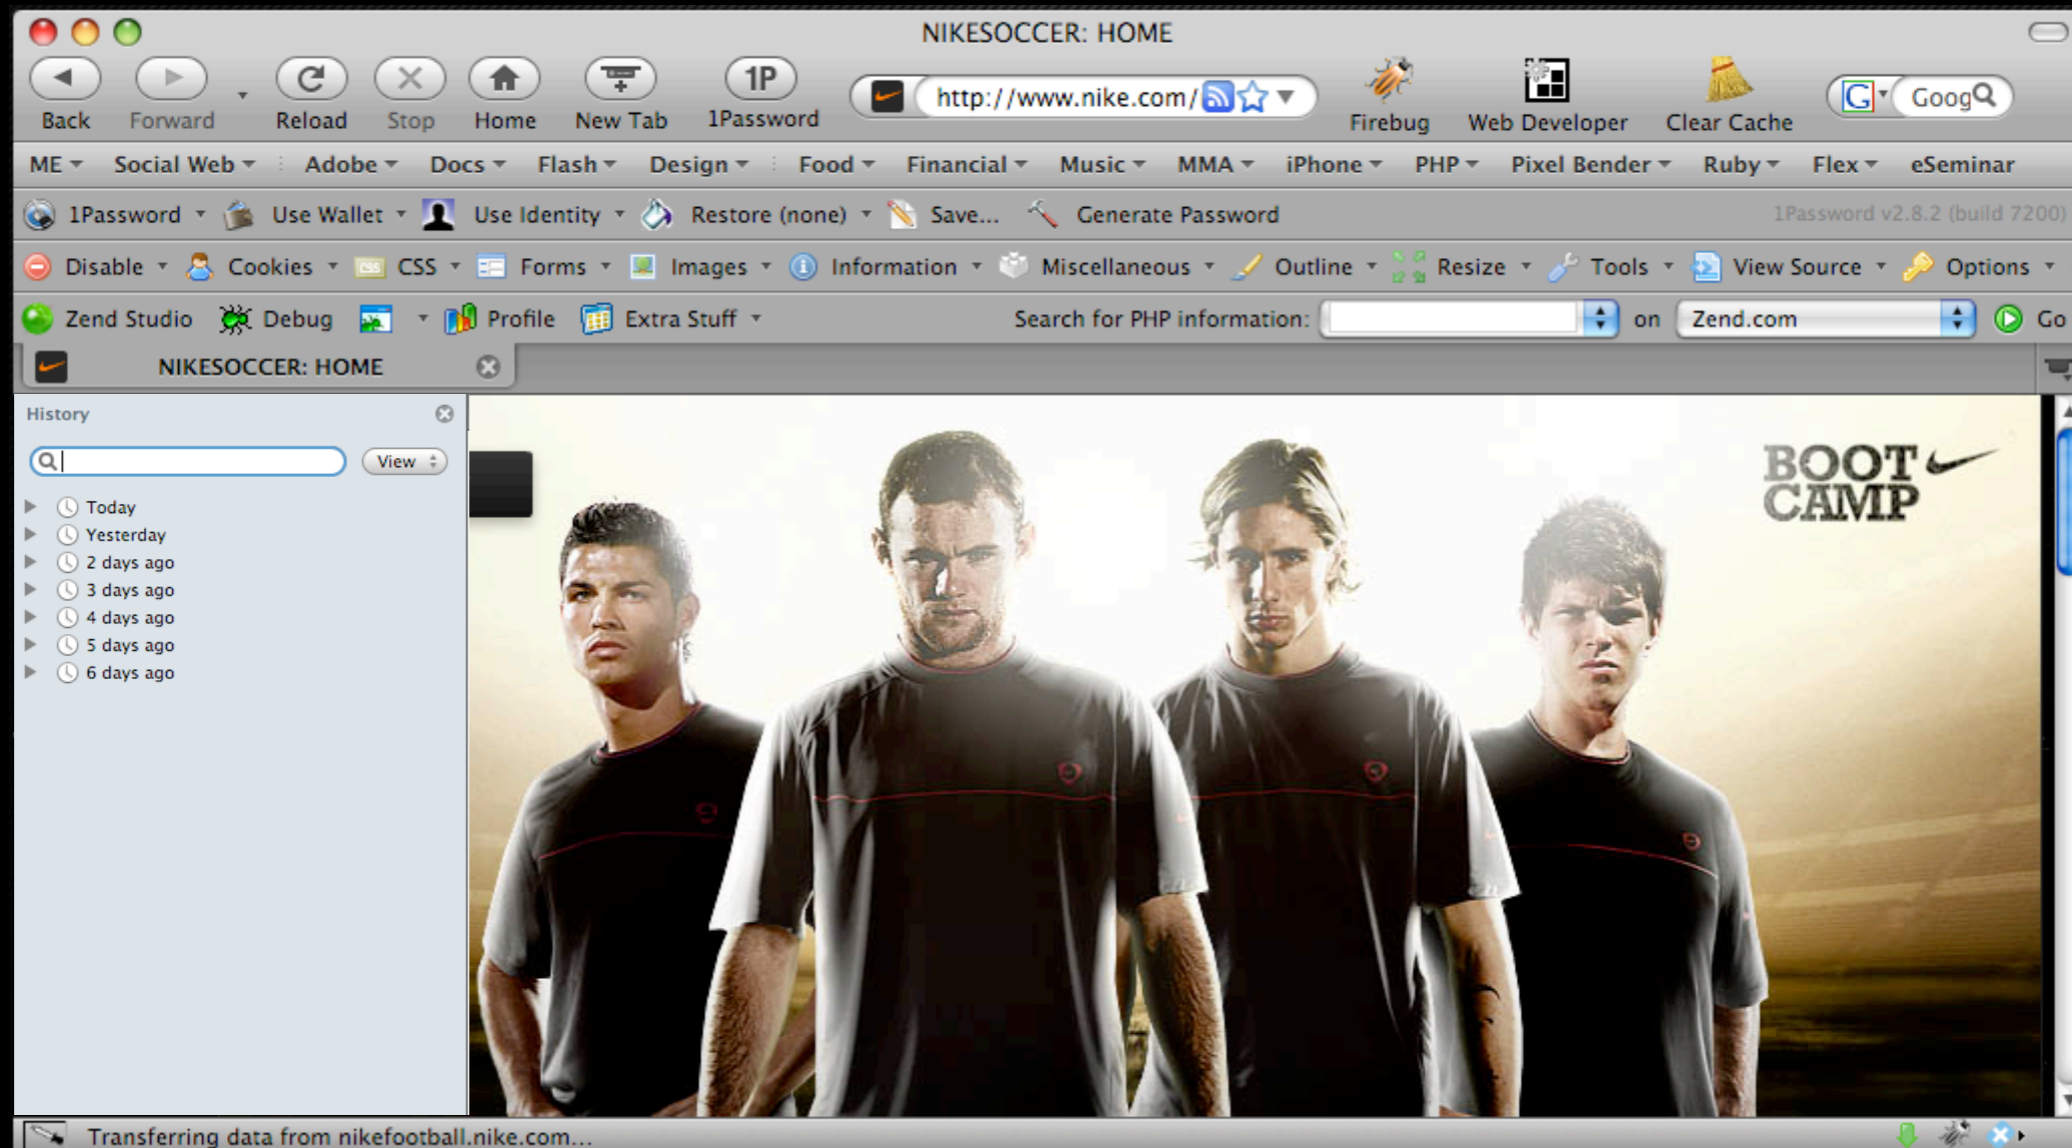

- ▶ Brand always surrounded by browser chrome
- ▶ Relies on internet connectivity
- ▶ No integration with the user's desktop

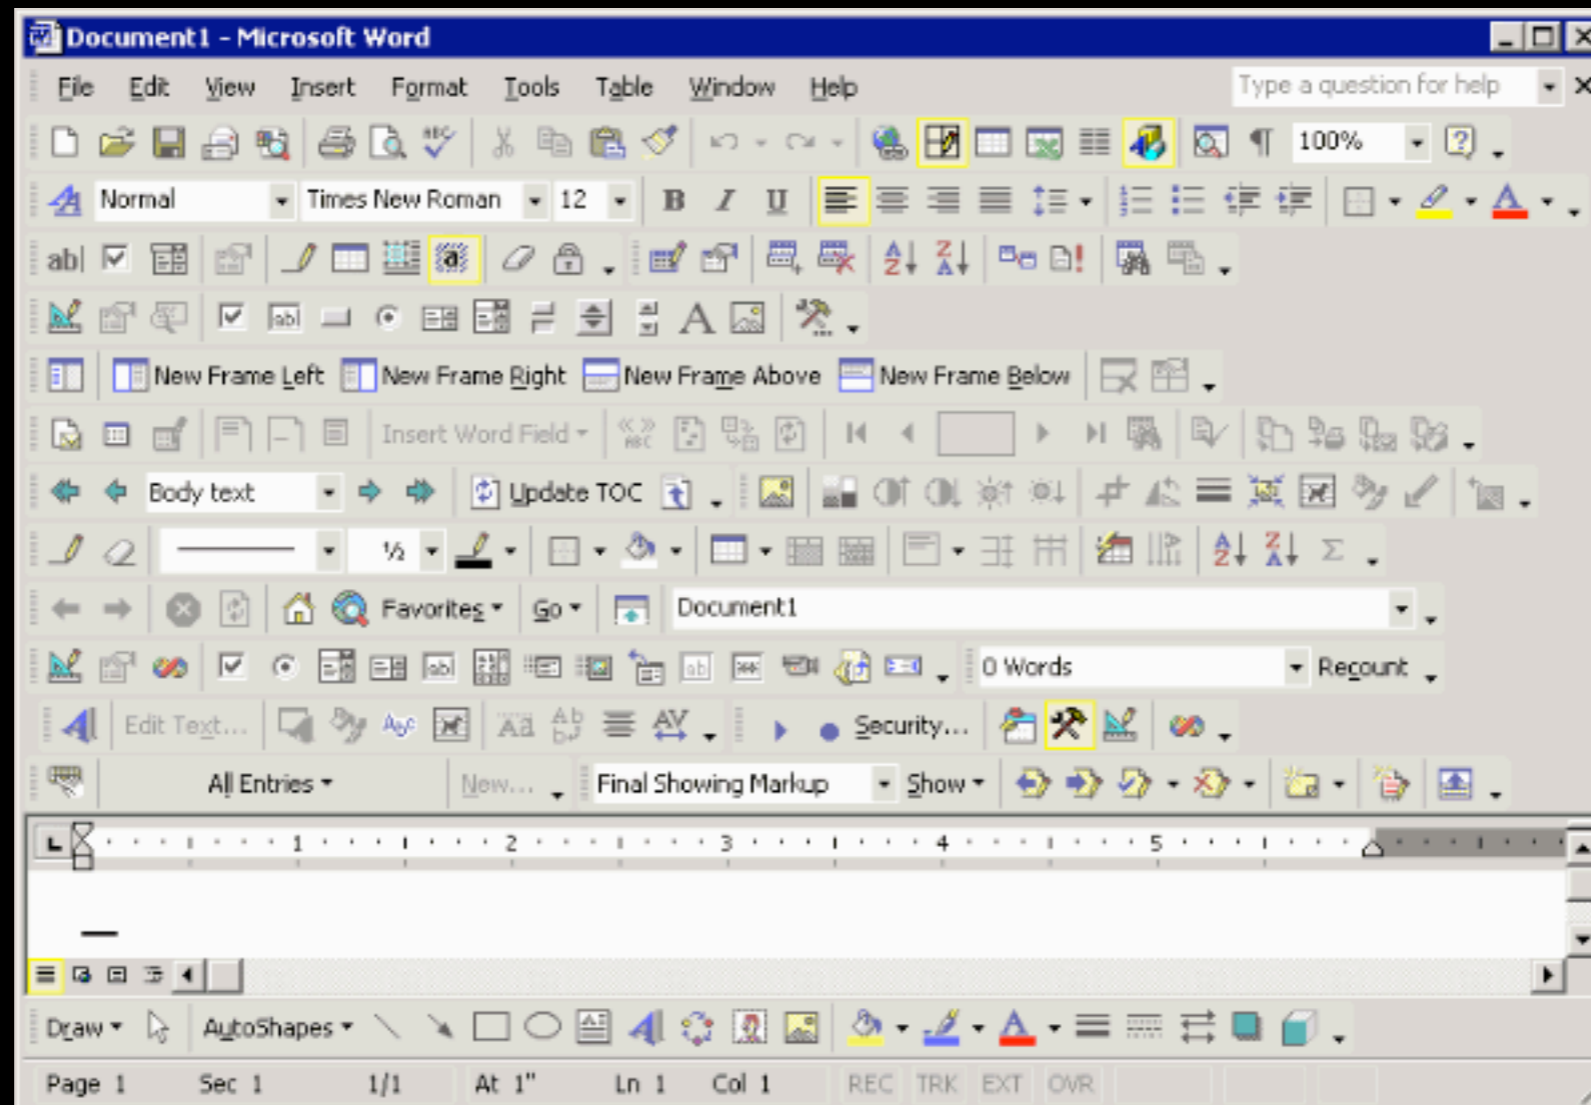

# Best Case Scenario

# Worst Case Scenario

# Traditional Desktop Applications

There are some exceptions of course.

# Traditional Desktop Development

Usually requires team a team of engineers.

# Overview of AIR

The Adobe® AIR™ runtime lets developers use proven web technologies to build rich Internet applications that deploy to the desktop and run across operating systems.

# Overview of Branding Options in AIR

- ▶ Custom window chrome
- ▶ Desktop, Dock, and System Tray icons
- ▶ System notifications
- ▶ Run applications in background
- ▶ Same look regardless of operating system
- ▶ Launch at startup
- ▶ Read and write files on user's system

# AIR application demos

# Window Chrome

Designers can choose from variety of different window chrome options including:

- ▶ **Default system chrome**  
*Users will see their normal OS window style*
- ▶ **Custom chrome**  
*Designers can create a completely unique window style including non-rectangular and transparent areas*

# System Chrome

# System Chrome

# Custom Chrome

# Chromeless Applications

# Disclaimer

*There are definitely advantages to using system chrome as it is what the user is accustomed to on their particular operating system.*

*Custom chrome, used properly, can greatly enhance the impact of an application. When used improperly it can turn off users.*

# Application Iconography

Brands can maintain desktop persistence by setting a range of icons on the desktop including:

- ▶ Desktop shortcuts
- ▶ Start menu icon
- ▶ Dock icon (OSX)
- ▶ System tray icon (Win)

# Desktop Shortcuts

Recycle Bin

It doesn't get much more self-explanatory than this.

Pizza Hut

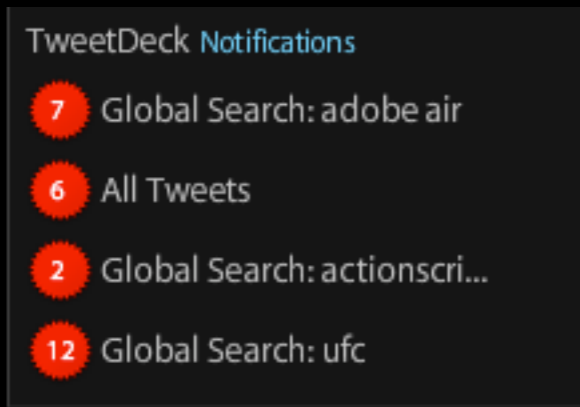

You provide your AIR application with a custom PNG file and AIR creates the necessary icon formats for each OS.

# Dock Icons

On Mac OS X you can add your brand's icon to the user's dock. This icon can also have a customized menu.

# System Notifications

Provide custom desktop alerts to keep your users updated about your application.

They also provide a means for additional branding exposure.

# Not Just Rectangles

# Notification examples

# Reading and Writing Local Files

Full file API allowing developers to read and write files on the user's system. This allows things such as:

- ▶ Creating offline modes for your application
- ▶ Cache data to limit bandwidth
- ▶ Create persistent state for your application

# AIR 1.5

## Flash Player 10 integration

AIR 1.5 includes all the new features contained in Flash Player 10.

## Encrypted local / SQLite databases

Local SQLite databases can now be fully encrypted.

## Squirrelfish JavaScript VM

The WebKit running in AIR will support this JavaScript VM.

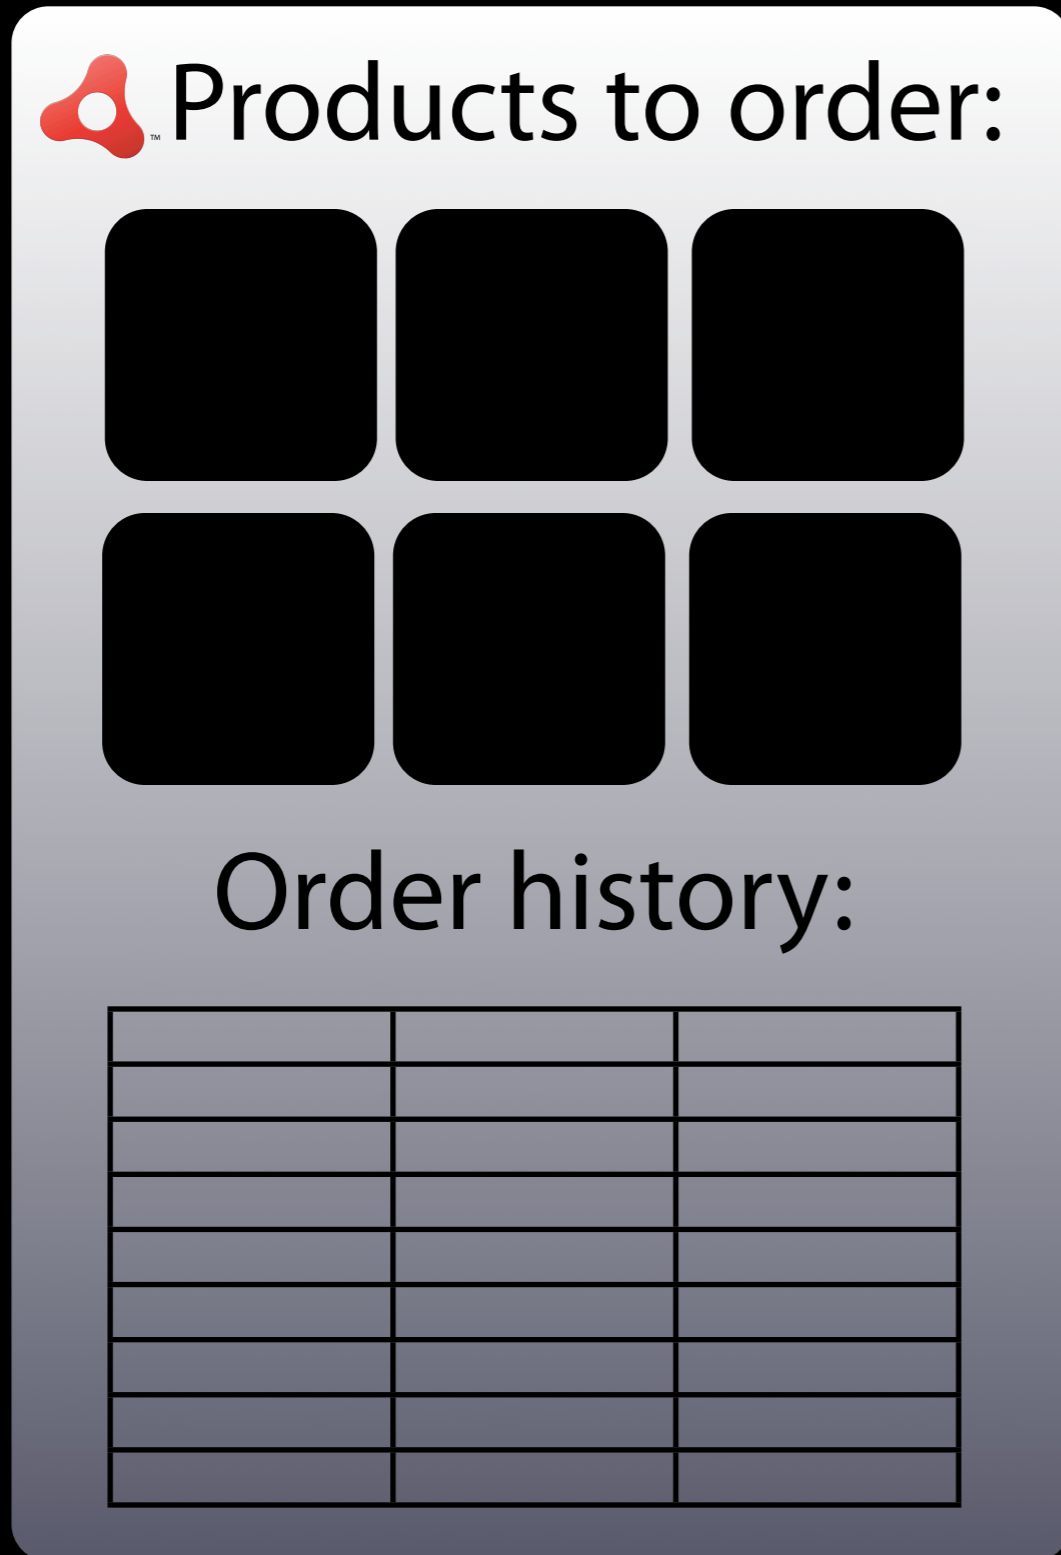

## Lots of bug fixes

Launching a URL will open in the user's default browser, etc.

# AIR application ideas

# AIR idea: Ordering app

## Notification

"Order placed, you can expect it in 30 minutes"

- easy access
- first time login
- order tracking

# Pizza Hut ordering app

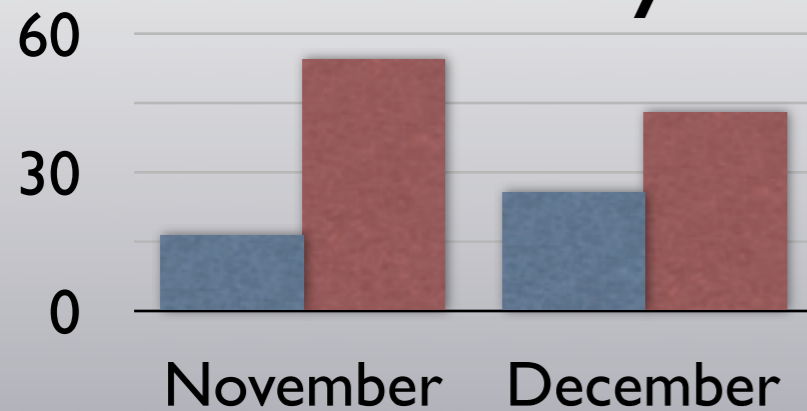

# AIR idea: House consumption statistics

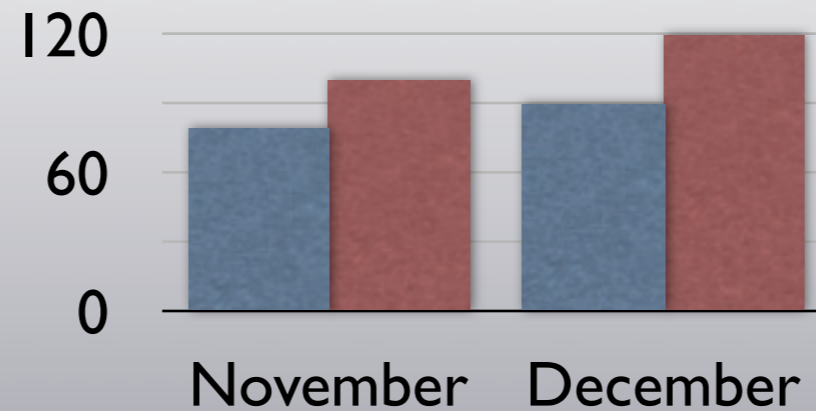

## Statistics

### Electricity

### Gas

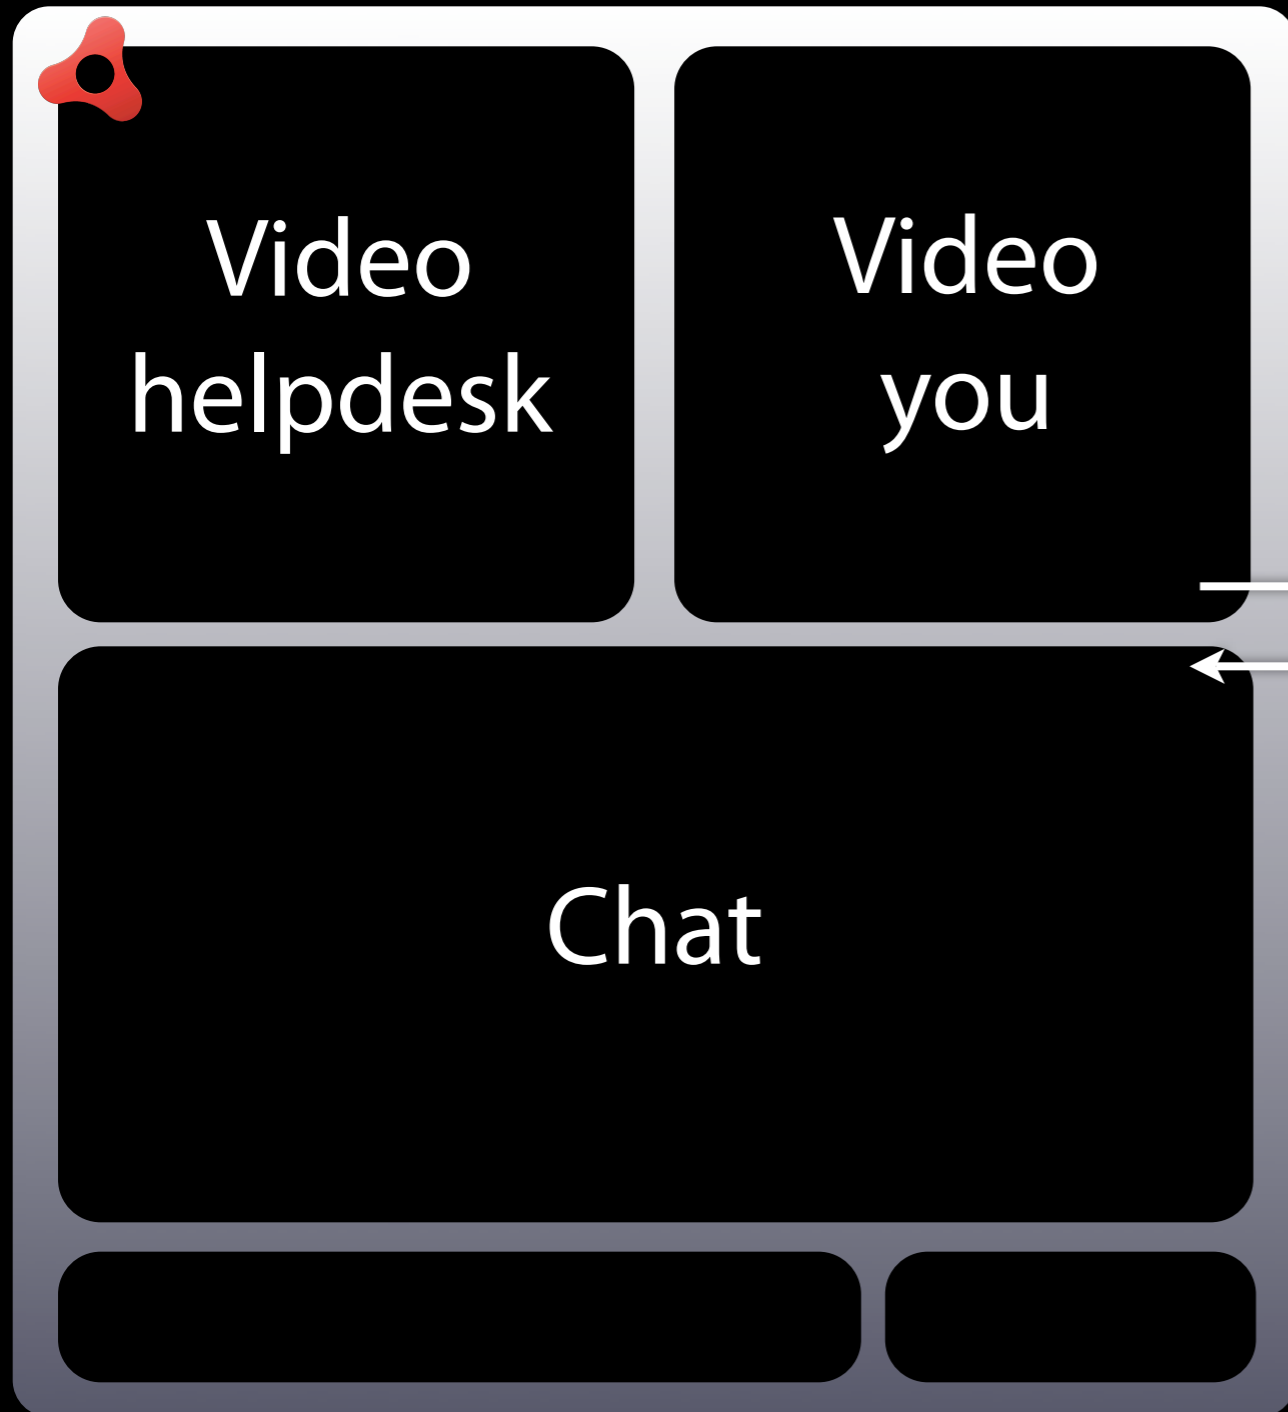

### Payment history:

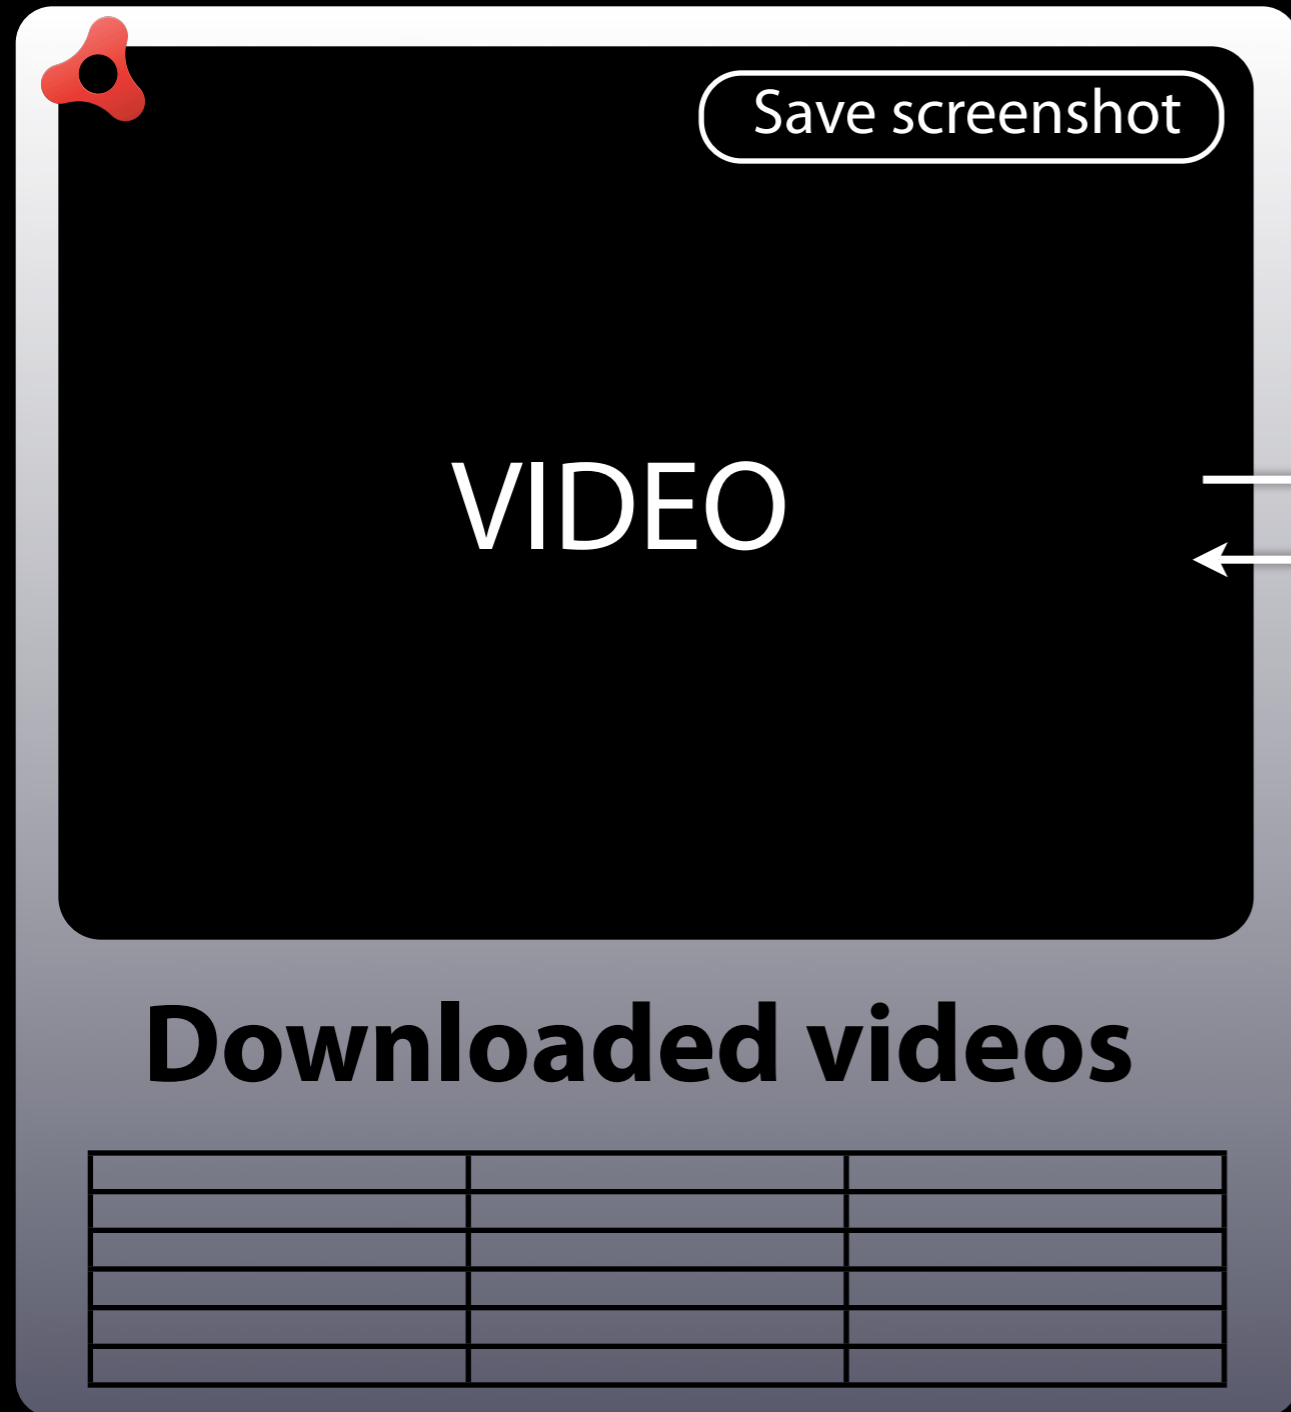

- instant info
- offline statistics
- history compare

# AIR idea: Helpdesk

- drag and drop  
image/screenshot

# AIR idea: VideoPlayer + live + download + screener

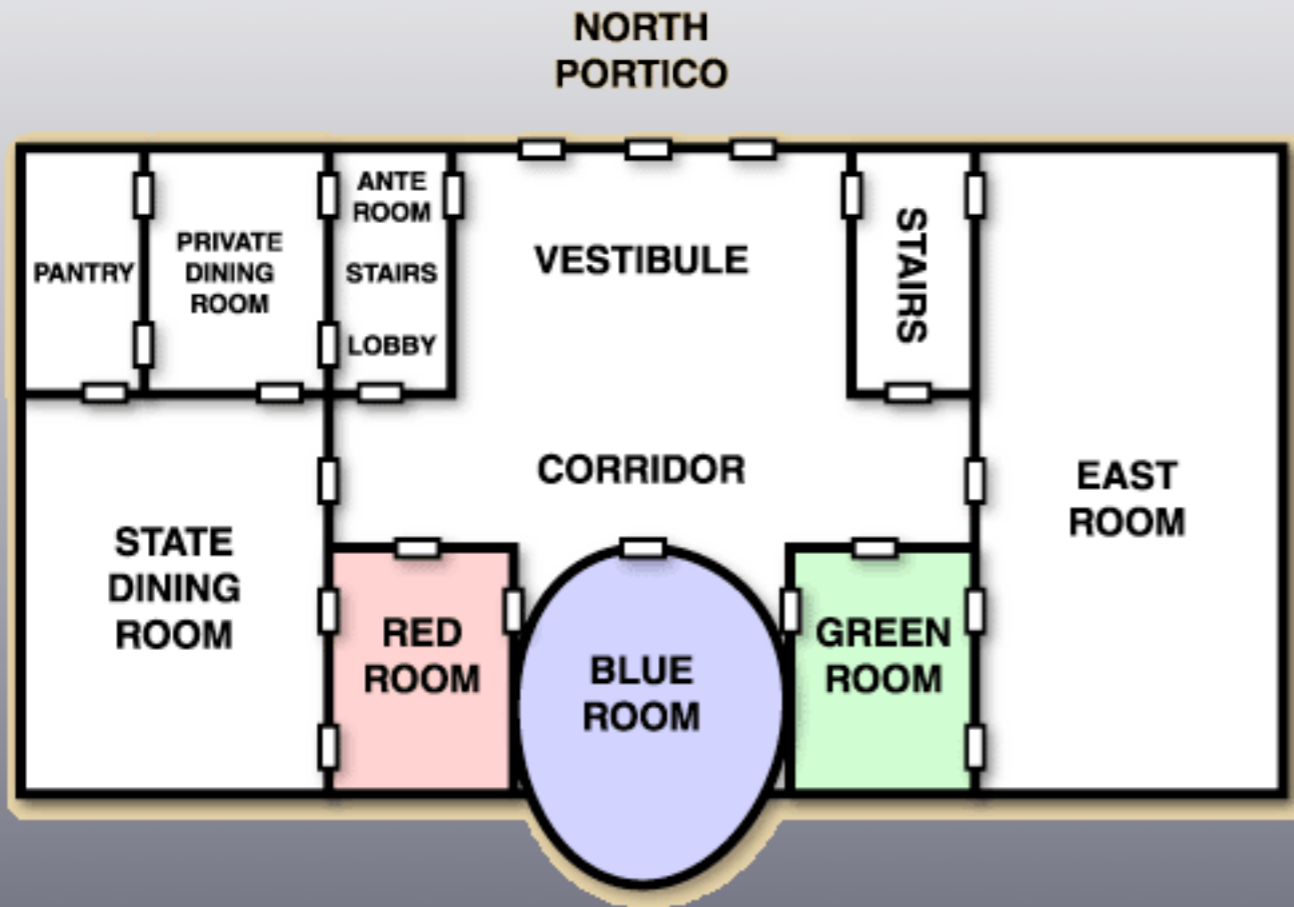

- drag and drop  
image/screenshot

# AIR idea: House control

## My House

- light control (indoor/outdoor)
- doors locks
- garden control
- cameras
- temperature
-

# AIR idea: Shopping center

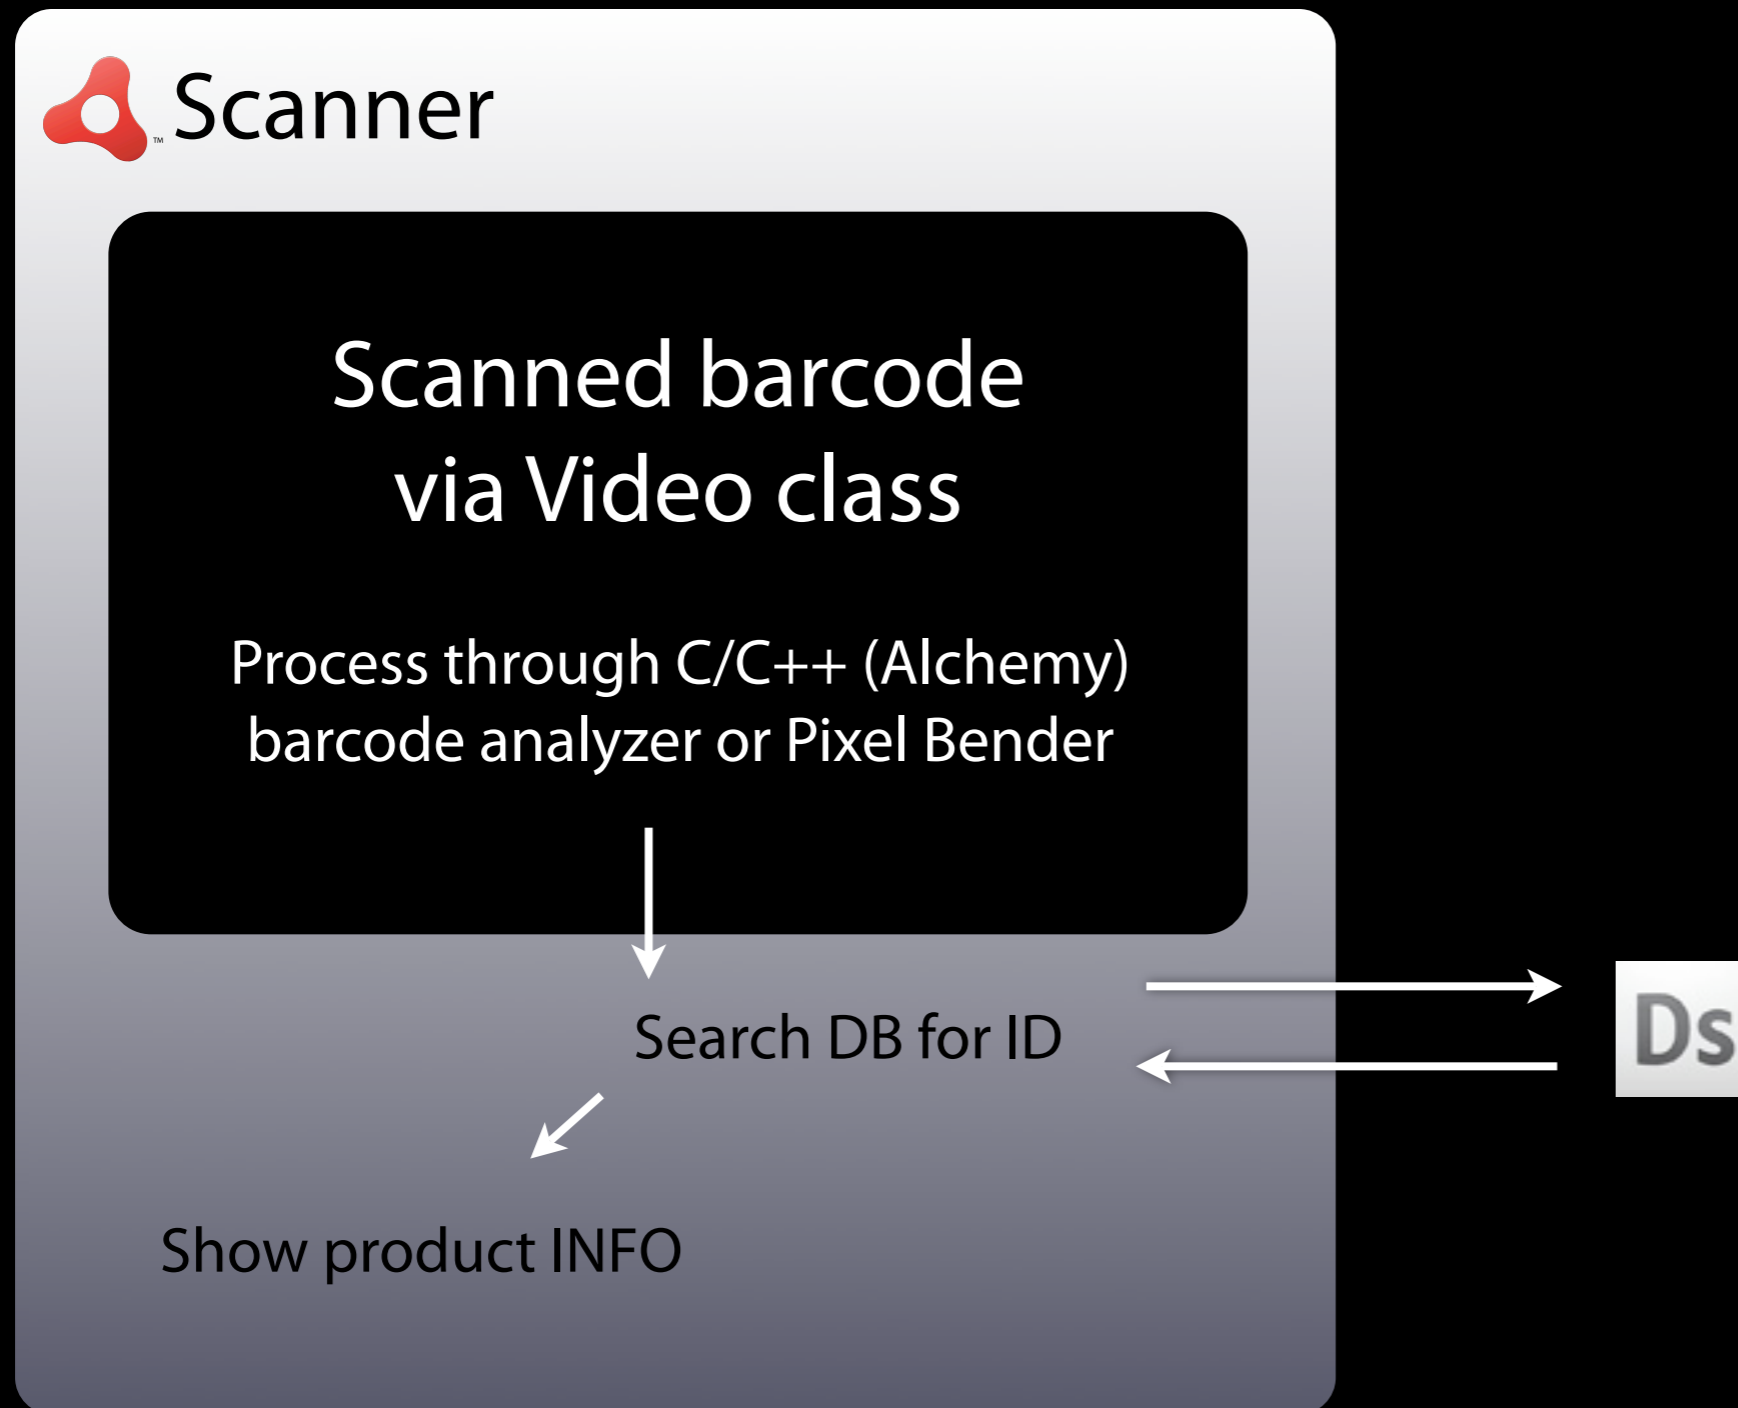

- auto-update (offline database)
- preorder
- still in hand

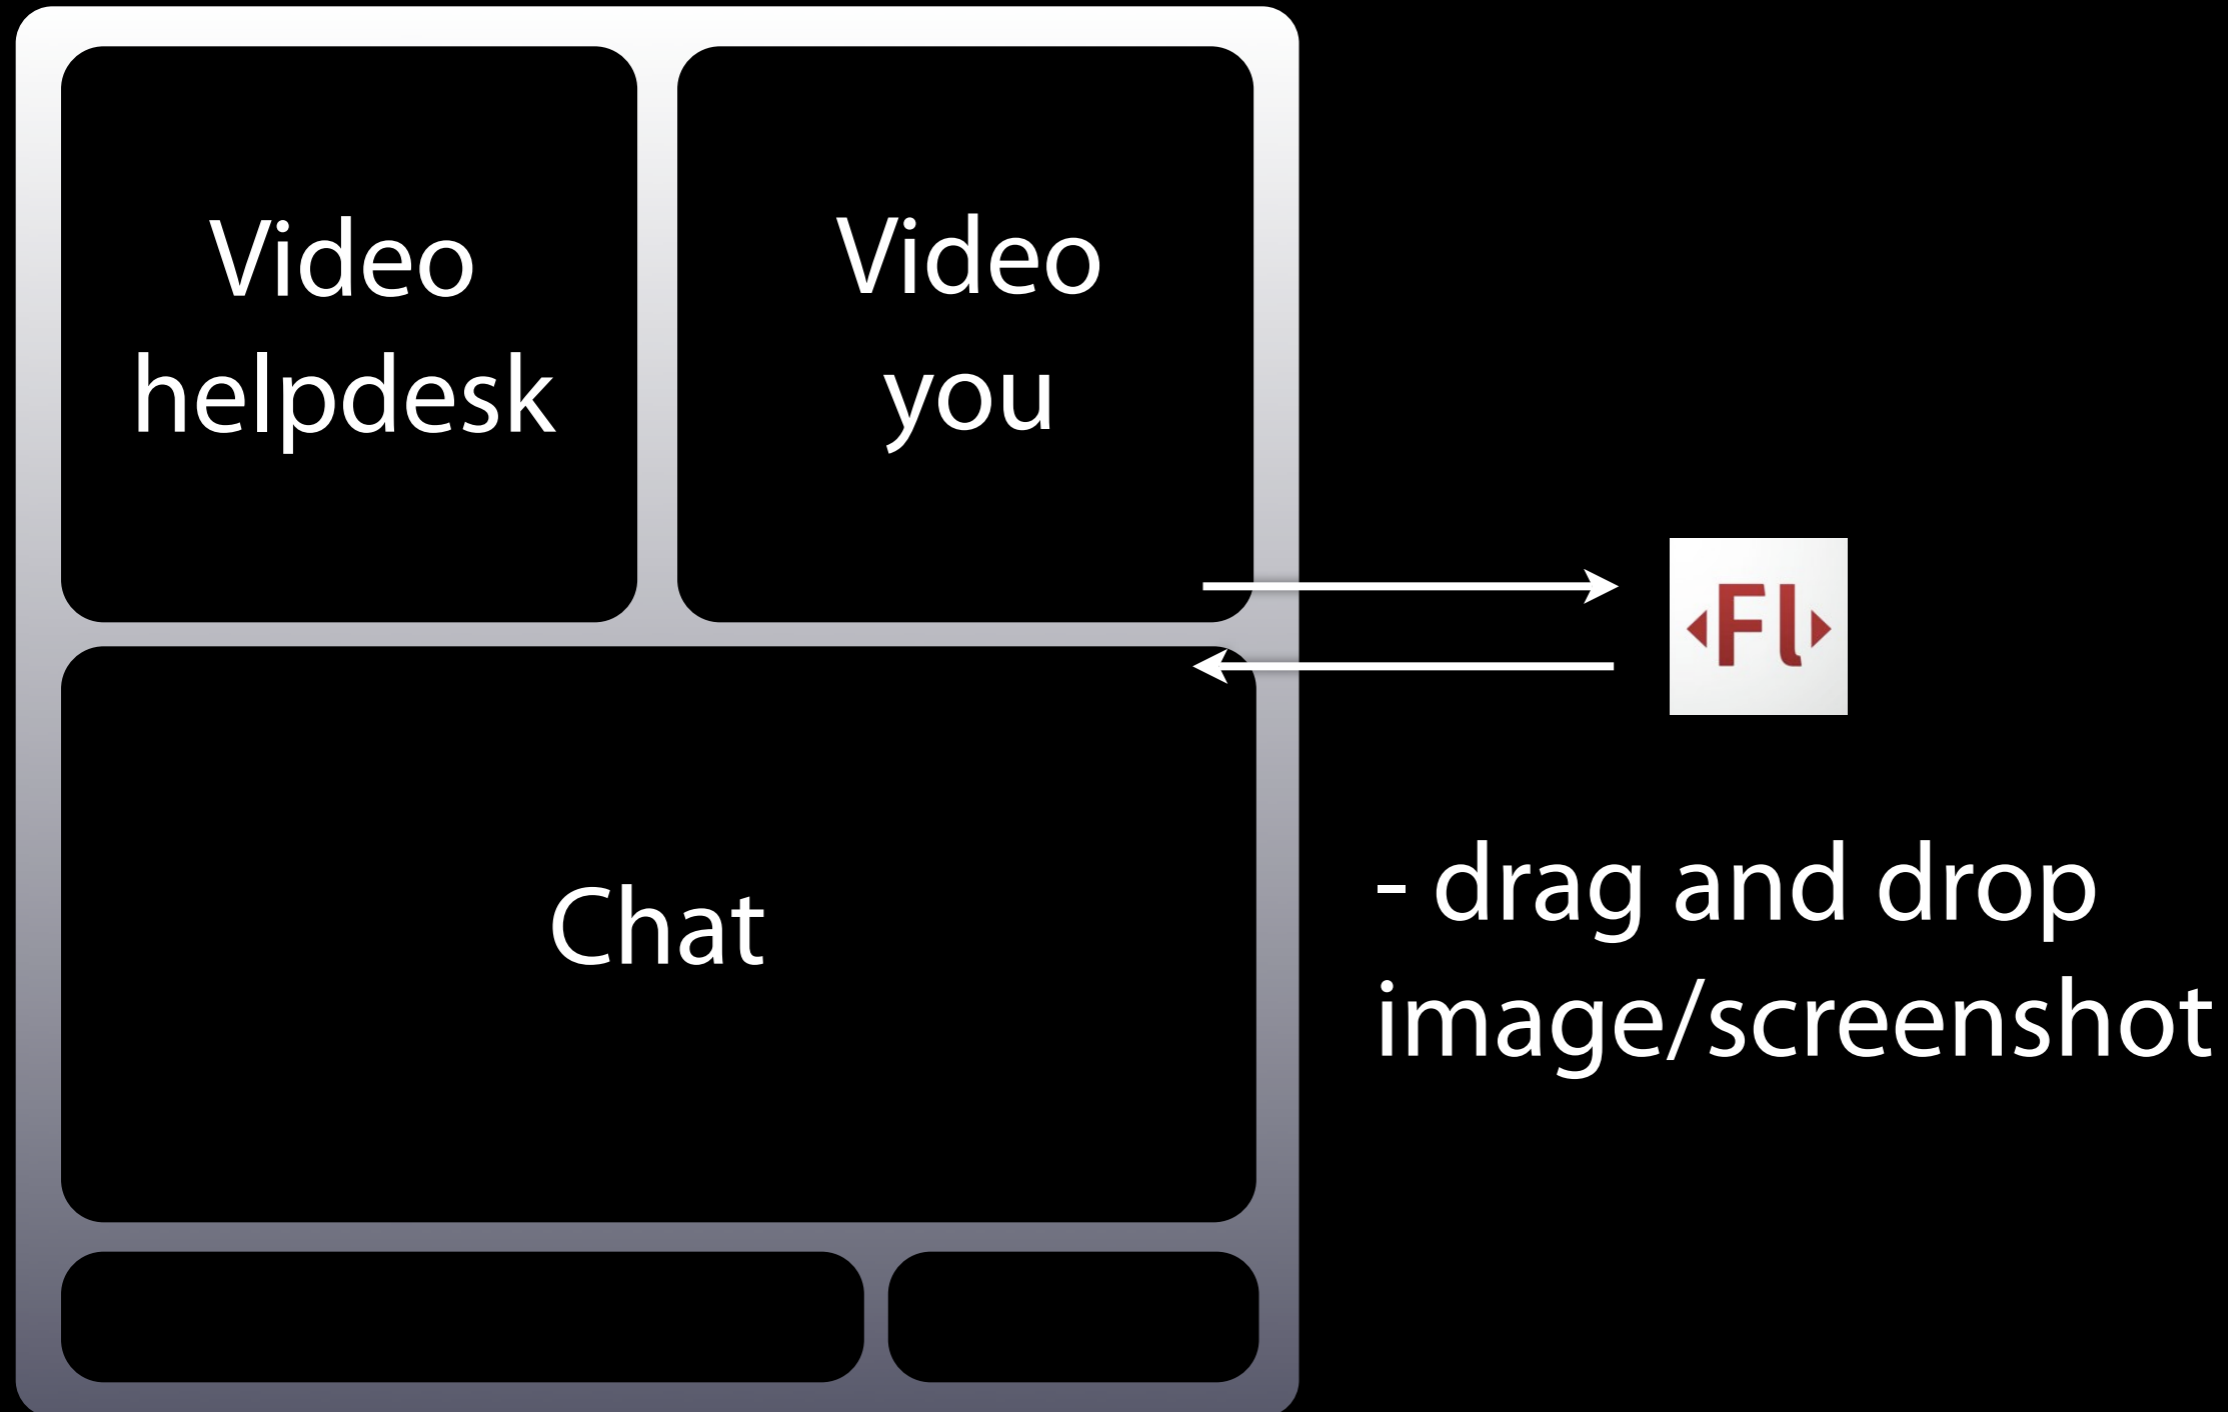

**Seller:**

- drag and drop photo + add info
- sell immediately

# AIR idea: Shopping scanner

# AIR idea: P2P phone + instant messenger

 Flash Player 10

# Native 3D Support

Four new properties have been added to DisplayObjects:

- ▶ `DisplayObject.rotationX`
- ▶ `DisplayObject.rotationY`
- ▶ `DisplayObject.rotationZ`
- ▶ `DisplayObject.z`

3D is fully interactive but there is no automatic Z sorting. Not meant to replace engines like Papervision3D, Away3D, and Sandy.

# Advanced Text Engine

The new engine provides a low level framework that supports complex scripts, along with improved text flow capabilities.

Adobe will release a series of advanced text components which will enable features like:

- ▶ RTL text layout
- ▶ Animation and anti-aliasing of device fonts
- ▶ Vertical text layout
- ▶ Multi-column text with flow
- ▶ Multilanguage text layout

# Visual Performance

Flash Player 10 uses the graphics processor (GPU) on the video card to accelerate image compositing and video decoding.

- ▶ New WMODES for enabling HW acceleration
- ▶ Software rendering as fallback
- ▶ Large performance increases over SW rendering

Will accelerate video decoding and compositing processes such as blending, filtering and blitting operations.

# New Drawing API

Expands and extends the current drawing API to allow for read/write rendering, 2.5D features, memory improvements, and performance improvements.

New features include:

- ▶ 3D triangle meshes (low-level render access)
- ▶ Bitmap and gradient strokes
- ▶ Re-style drawing elements without re-drawing
- ▶ Bitmap fills using UV coordinates

# Dynamic Sound Generation

The Sound class has been extended to allow dynamic audio generation and processing.

- ▶ `Event.SAMPLE_DATA`
- ▶ `Sound.extract()`
- ▶ Extracted data can be processed using Pixel Bender\*

# Additional Features

- ▶ Loader.unloadAndStop()
- ▶ Partial fullscreen keyboard support
- ▶ New Vector datatype (typed arrays)
- ▶ Multi-bitrate video streaming\*
- ▶ Speex audio codec
- ▶ Lots of bug fixes, performance increases, and API tweaks
